

Question 1: Where is generative AI being used?

Sub-question
1.1 Which occupations/workplace account for the largest shares of observed workplace AI conversations?
1.2 What types of tasks are most exposed to AI?

Variable	Definition
task_percentage_all	Percentage of all observed AI conversations associated with the task overall. This is a task-level exposure measure.
task_percentage_job	Percentage of all observed AI conversations attributed to the occupation-task pair. Summing this measure across tasks within an occupation gives occupation AI exposure.
num_jobs_sharing_task	Number of occupations that include the task in the source data. (Which has the most proportion in the dataset)
task_cluster	The categories of task names generated by AI

Question 2: Is AI doing the work or helping the worker?

Sub-question
2.1 What kind of occupations are most automation-oriented/augmentation-oriented?
2.2 What is the overall balance between automation and augmentation?
2.3 Which specific interaction modes drive automation and augmentation?

Variable	Definition
valid_q2_observation	TRUE when interaction values are complete, filtered ≤ 0.5 , task_percentage_job > 0 , and the five interaction modes have a positive total.
task_automation_score	directive + feedback_loop.
task_augmentation_score	task_iteration + validation + learning.
task_automation_share	Automation score divided by total interaction score for valid Q2 observations.
task_augmentation_share	Augmentation score divided by total interaction score

Variable	Definition
	for valid Q2 observations.
task_interaction_score_total	Sum of all five interaction-mode ratios.
feedback_loop_share	feedback_loop divided by task_interaction_score_total.
directive_share	directive divided by task_interaction_score_total.
task_iteration_share	task_iteration divided by task_interaction_score_total.
validation_share	validation divided by task_interaction_score_total.
learning_share	learning divided by task_interaction_score_total.

Question 3: For whom is AI a worker, and for whom is it a copilot?

Sub-question
3.1 How do AI exposure differ across Job Zones?
3.2 How do Job Zone and salary jointly relate to AI interaction patterns?
